What This Product Is

NEW SZN is a performance dashboard built for digital marketing agencies. It pulls together everything an agency cares about — sales calls, appointment booking activity, paid ad performance, and team productivity — into one place. It tracks progress toward monthly goals, automatically calculates performance numbers, spots when things are going wrong, and uses AI to give the team coaching-style recommendations.

Different team members see different things based on their role, and clients can log in to see only their own business performance.

Who Uses It

Admins

Agency leadership. See everything across every client, manage users, manage settings, configure AI and alerts.

Closers

Salespeople. Log their calls, see their own performance, compete on leaderboards, get daily targets and coaching after lost calls.

Setters

Appointment bookers. Log daily outreach activity (conversations, replies, proposals, calls booked), hand off warm leads to closers, and track ad follower growth.

Clients

The agency's customers. Read-only view of their own business performance. Cannot see other clients' data.

Main Features

01 Master Dashboard

The big-picture view of the business.

- 12 key performance numbers (revenue, cash collected, calls booked, close rate, average deal size, no-shows, return on ad spend, cost per follower, ad spend, and more)
- Monthly goal progress bars (green when on pace, amber warning, red alert)
- Daily trend arrows showing whether today is up or down vs. yesterday
- Top performers leaderboard
- Setter activity summary (admin view)
- Interactive revenue and deal trend charts

02 Sales & Closing Dashboard

For tracking calls and deals.

- Today's call log — every call with outcome, revenue, and who closed it
- Click any call to see full notes, objection reason, and contact info
- Pie chart of outcomes (closed / rescheduled / lost / no-show)
- Daily revenue trend chart
- "Log Call" form for closers to record new calls
- The dashboard is **locked and blurred** until the closer logs their first call of the day (built-in accountability)

03 Ads Dashboard

For paid Facebook/Instagram ad performance.

- 12 ad metrics (spend, cost per follower, cost per call, cost per customer, return on ad spend, impressions, reach, click-through rate, etc.)
- Full campaign table — sortable, filterable, columns can be hidden
- Filter by status (Active / Paused / Archived)
- Categorize ads as "Typeform-focused" or "Normal"
- Flag problematic ads for review with a reason
- Daily spend trend chart
- Manual sync button to pull fresh data from Facebook (15-minute cooldown)
- AI-written summary of campaign performance after each sync

04 Appointment Setting Dashboard

For setters logging daily outreach.

- 8 metrics (conversations, replies, proposals sent, calls booked, follow-ups, conversion rates)
- Daily activity log (editable)
- Booking trend chart
- 30-day heatmap showing how busy each day was
- Mini trend lines on each metric card
- "Log Day" form to record daily activity

05 Call Logs (Historical)

A complete searchable history of every call ever logged.

- Sortable and filterable by outcome, lead source, closer, and date range
- Quick presets (This Month, Last Month, Last 7 Days, Year-to-Date)
- Edit or delete entries
- Paginated for fast browsing

06 Lead Tagging & Follow-Up

Built into the Sales and Call Logs dashboards.

- Every call/lead can be tagged: closed, follow-up, hot follow-up, no-show, declined, and more
- Inline editing — change a tag or update lead info directly from the table
- Closers and setters manage their own follow-up queues
- Admins can reassign leads between closers

07 Settings (Admin Only)

The control panel.

- Set monthly revenue and call goals per client
- Connect Facebook/Instagram ad accounts
- Customize the AI's coaching personality per dashboard
- Configure Slack notifications and schedules
- Set alert thresholds (warn me when close rate drops below X)
- Manage users and client assignments

08 AI Reports

Scheduled PDF reports.

- Full history of every report generated
- Daily, weekly, and monthly options
- One-click download
- "Generate Now" button for on-demand reports
- Each report includes an AI-written narrative with coaching-style recommendations

Smart / AI Features

AI Insights

Every dashboard has a "Generate Insights" button. The AI reads the current numbers (plus recent call notes or top campaigns) and writes 4–6 short observations in plain English.

Loss Debrief

When a closer logs a lost call, the AI automatically analyzes it and sends a Slack message with root-cause analysis (was it the pitch, the lead quality, or a repeated objection?) plus tips.

Anomaly Detection

Every 4 hours, the system checks key metrics against a 28-day average. If something drops more than 20%, it sends a Slack warning. More than 35%, a critical alert.

Next Best Action

Looks at current performance and proposes 3–5 urgent priorities ("Your close rate dropped 15% this week", "Cost per call is trending up", etc.).

Daily Targets

Every morning, each closer and setter gets a personalized Slack message with their target for the day and whether they're on pace for the month.

Multi-Currency Support

Handles clients in different currencies with live exchange rate conversion.

Campaign Narratives

After each Facebook sync, the AI writes a 1–2 sentence performance summary that appears on the Ads dashboard.

External Connections

Facebook / Instagram Ads

Pulls campaign data every hour automatically. Pulls spend, impressions, reach, results, and click-through rate. Stores 90 days of history.

Slack

Sends daily end-of-day reports, weekly and monthly PDF reports, shame/fame leaderboards, loss debrief messages, anomaly alerts, streak milestones, and big deal celebrations. Everything is configurable.

Email

Sends account invites and password reset links.

What's Live

✓ RUNNING IN PRODUCTION

- All four main dashboards (Master, Sales, Ads, Setter)
- Call logs with full searchable history
- Lead tagging and follow-up management
- AI insights on every dashboard
- AI loss debrief with Slack delivery
- Anomaly detection with auto-alerts
- Next best action engine
- Daily target Slack DMs
- Full Slack integration (reports, alerts, shame/fame, milestones)
- Facebook/Instagram ad sync (hourly auto + manual)
- Multi-currency support with live exchange rates
- Mobile-responsive design across every screen
- Admin settings panel (goals, alerts, AI config, Slack config, user management)
- Scheduled PDF report generation with AI narratives
- Role-based access (Admin / Closer / Setter / Client)
- Real production data — 30+ clients, 2,000+ logged calls, 50+ ad campaigns

Bottom Line

The product is live in production and being used day-to-day to run the agency. All four dashboards, every AI feature, the Slack integration, the Meta ad sync, multi-currency, and the admin panel are fully operational with real customer data.
